

Mounting guidelines for the ProTee VX system

Your available height dictates the distance between the VX system and the hitting area. Depending on your available space, we have listed the minimum and maximum spacing requirements below.

The VX does not require a specific distance from the impact screen to the hitting area. The VX will read the ball and club in the space between the hitting matt and the VX itself.

MAX

VX height: **305cm / 10ft**

>>> Distance hitting area to VX: 110cm / 3ft 7"

We recommend a clear space of 300cm / 10ft on your left, right and back-side for a safe, unobstructed swing

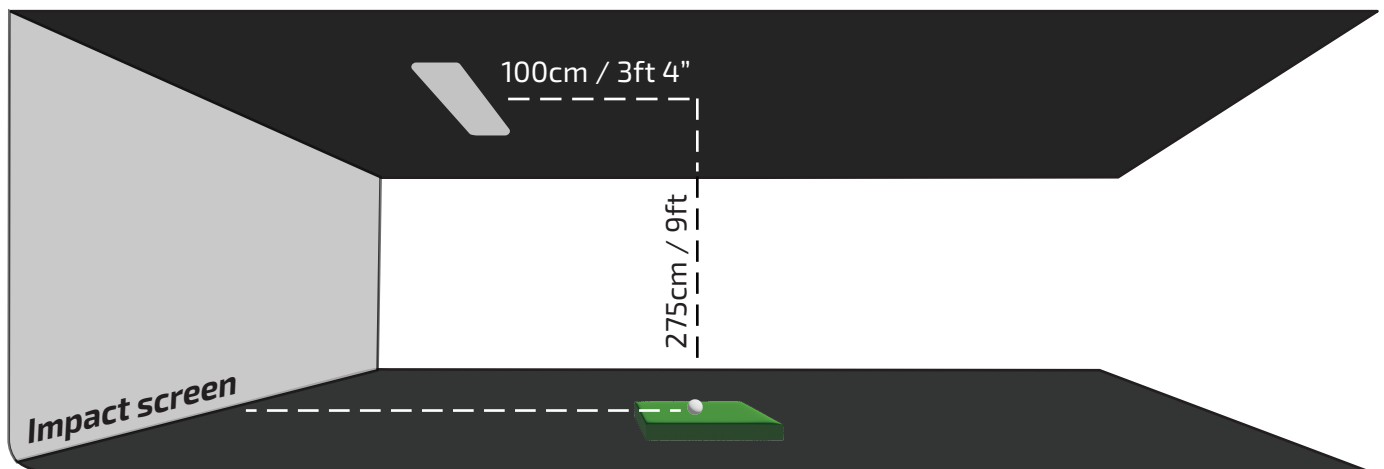

MIN

VX height: **275cm / 9ft**

>>> Distance hitting area to VX: 100cm / 3ft 4"

We recommend a clear space of 300cm / 10ft on your left, right and back-side for a safe, unobstructed swing

If set up correctly, the angle between the ball and VX system will be 70°, minimising the risk of hitting the system with the ball
